Important Update on Windows 10 End of Support

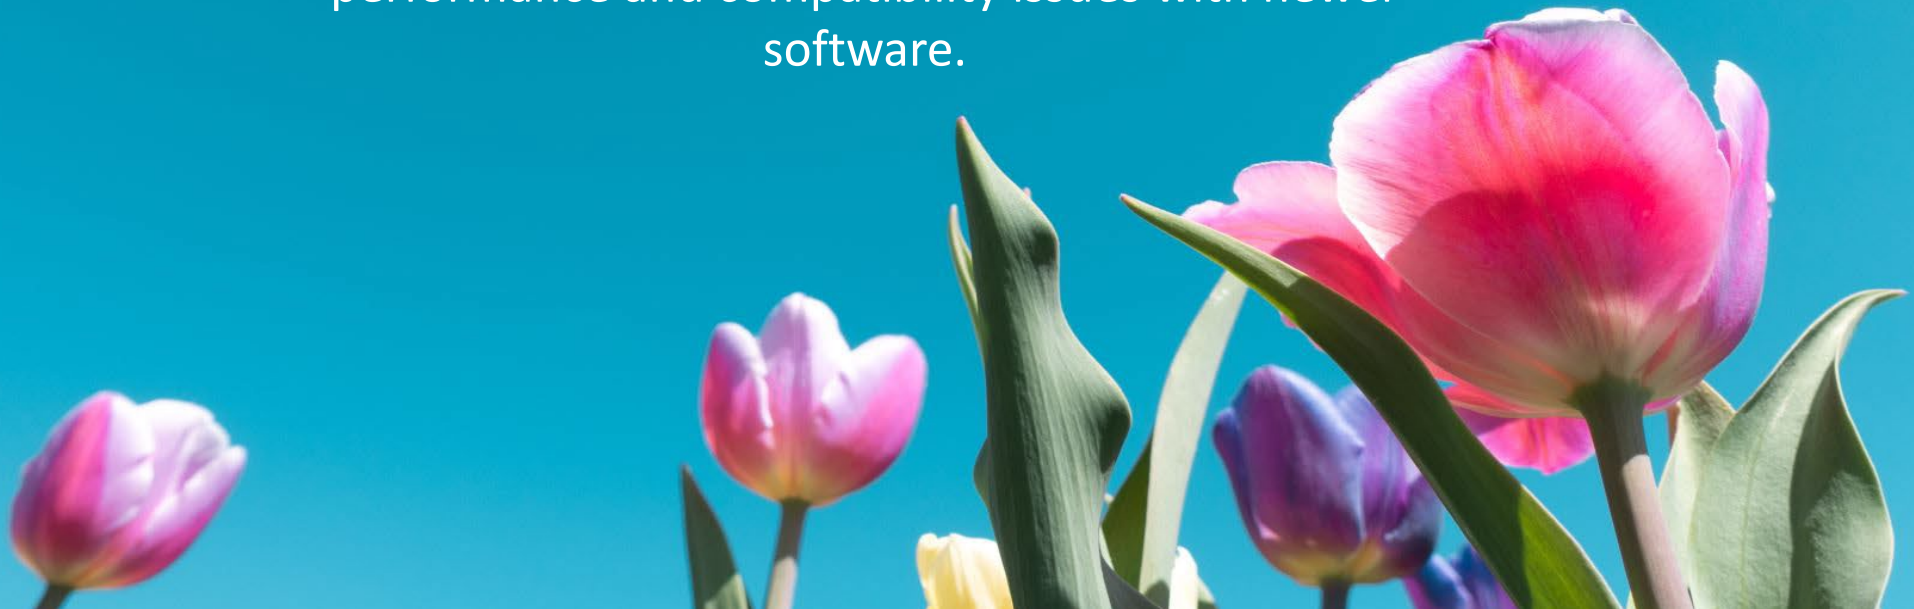

Windows 10 will reach end of support on October 14, 2025

## What Does This Mean for You?

When Windows 10 is no longer supported, your system will become more vulnerable to security threats, malware, and cyber-attacks. Without regular updates, your computer may also experience reduced performance and compatibility issues with newer software.

## What Are Your Options?

Upgrading to Windows 11 is the best way to ensure your system remains secure, efficient, and compatible with modern applications. However, not all computers are eligible for Windows 11 due to stricter hardware requirements. If your system is outdated, replacing it may be a more cost-effective long-term solution.

## Frequently Asked Questions

### 1. Should I upgrade my existing computer or replace it?

If your computer is over five years old, a replacement may be the better option. Upgrading only makes sense if your system meets Windows 11 requirements and still performs well for your needs.

### 2. How can I determine if my PC is compatible with Windows 11?

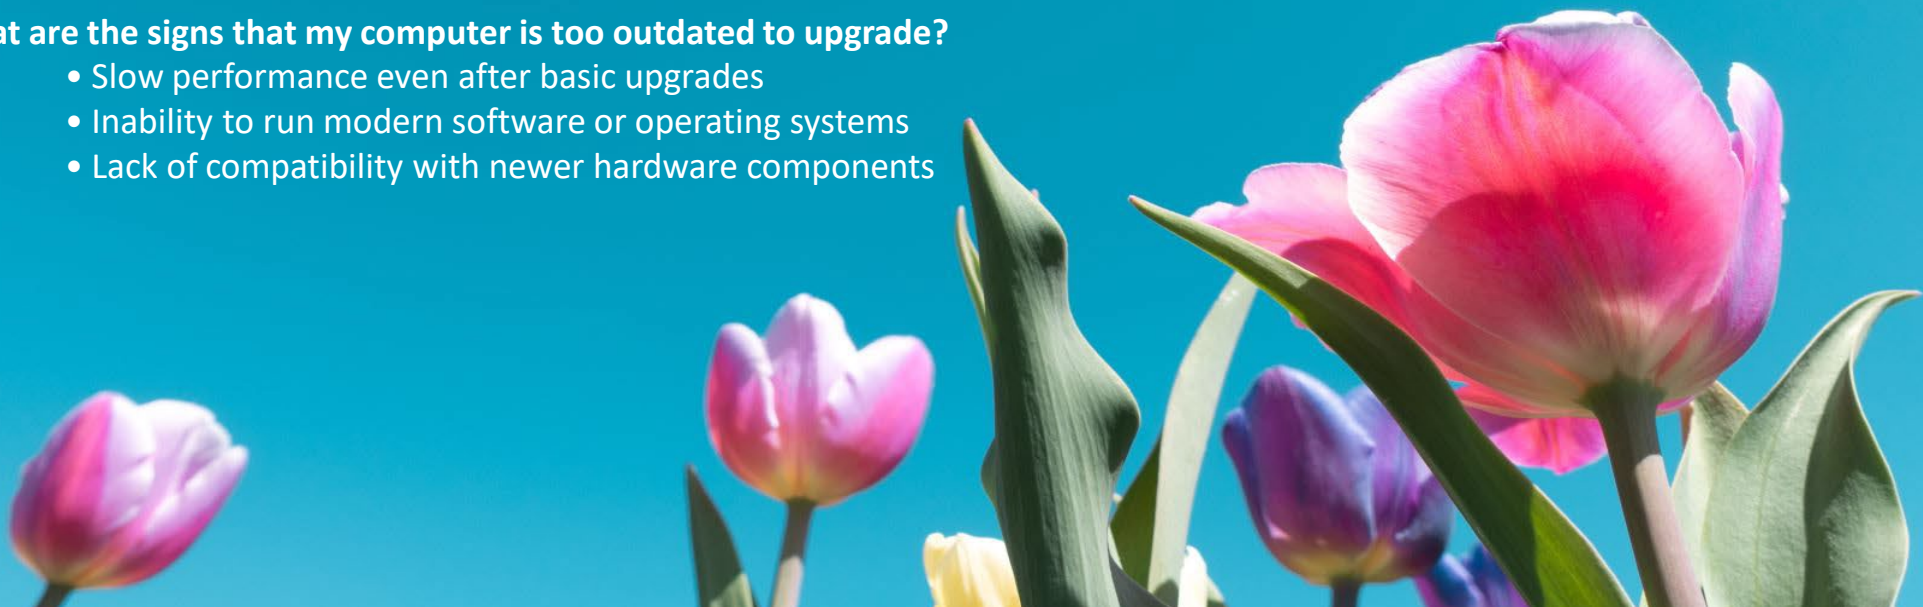

Microsoft provides a PC Health Check Tool to check compatibility. You can also reach out to us (Brookfield Technology Center) for assistance in evaluating your system.

### 3. When is it more cost-effective to replace a PC instead of upgrading?

If the cost of upgrades exceeds 50% of a new PC, it's usually better to invest in a replacement. Newer systems come with better performance, energy efficiency, and longer lifespans.

### 4. What are the signs that my computer is too outdated to upgrade?

- Slow performance even after basic upgrades
- Inability to run modern software or operating systems
- Lack of compatibility with newer hardware components

What are my next steps?
